Greenhouses that Last. Gardens that Inspire.

Green Team Builders designs and builds enduring garden structures that merge craftsmanship, horticultural wisdom, and functional design. Whether you are cultivating food, flowers, or a year-round sanctuary, our structures are built to perform in every season. From backyard growers to estate-scale installations, we create environments where structure meets soil, and vision meets harvest.

Our mission is to inspire people of all backgrounds to cultivate more than just plants—to cultivate lasting beauty, nourishment, and joy in all four seasons. From the first concept to the finishing details, each project reflects a commitment to time-honored methods and cutting-edge innovation. Let us help you transform your property, no matter the scale,

Why Choose Green Team Builders?

Expert Craftsmanship

Our builders are detail-oriented artisans skilled in both traditional and modern construction, making each greenhouse a signature of quality.

Horticultural Wisdom

From soil to sunlight, our team brings years of gardening experience and botanical insight to every project, ensuring thriving results.

Design for Performance

We fuse beauty and purpose, combining robust engineering with practical layouts for year-round productivity and visual appeal.

Get a Full Evaluation

Clients have different goals for their homestead or gardens. We listen carefully and bring to LIFE your goals and aspirations.

Custom hoop Greenhouse built by GreenTeamBuilders

Walk-In Garden Structures: An Enclosed Sanctuary for Growing

A fully framed, enclosed garden space typically constructed from, cedar, or timber framing. These structures provide physical protection from deer and wildlife while offering architectural beauty.

- Strong physical barrier against deer and small animals
- Defined growing footprint for organized raised beds
- Custom carpentry details including trellises and pergola extensions
- Designed to integrate with surrounding landscapes

Enclosed Roof with Poly Panels

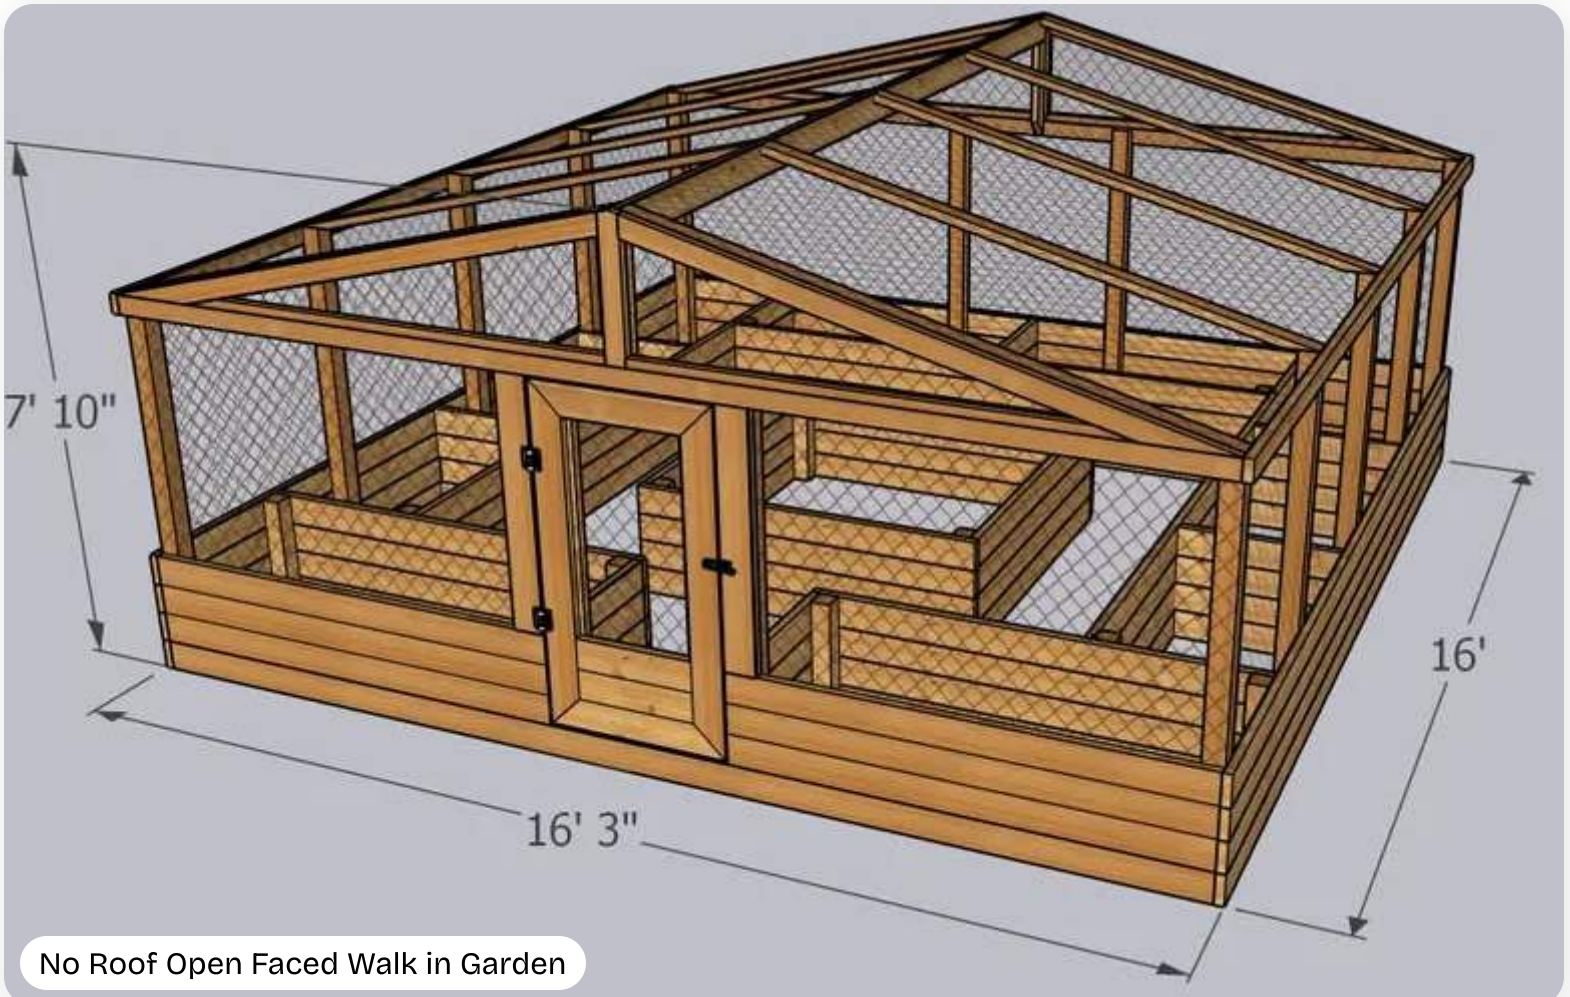

Larger Sqft Walk in Garden. Concrete Walkway or sub decorative gravel

No Roof Open Faced Walk in Garden

Larger Sqft Walk in Garden. Concrete Walkway or sub decorative gravel

No Roof Open Faced Walk in Garden

Polycarbonate Greenhouses: Four-Season Growing with Thermal Efficiency

A rigid greenhouse structure framed in wood or metal and enclosed with twin-wall or multi-wall polycarbonate panels that provide insulation while allowing high light transmission.

Twin-wall panels offer insulating air pockets, while operable vents help

Plan Your Lean To Greenhouse! Otherwise Referred to as Solar Rooms!

Separate Lean To Greenhouse

Hoop Houses / High Tunnels: Scalable Protection for Productive Growing

A semi-circular metal frame covered with greenhouse film. High tunnels are cost-efficient, scalable growing structures commonly used for food production and seasonal extension.

- Affordable entry into protected growing

Excellent for... (text is partially obscured)

Cold Frames / Mini Greenhouses: Small Footprint. Big Seasonal Advantage.

A compact, low-profile enclosure placed over raised beds or ground gardens to trap solar warmth and protect young plants from frost.

- Ideal for seed starting
- Protects from early and late frosts

Conservatory-Style Garden Structures: Architectural Garden Rooms

A larger, architecturally refined greenhouse designed as both a growing space and a living space. Often constructed with premium framing materials and expansive glazing systems.

- Year-round controlled environment

• Aesthetic focal point for outdoor environment

Additional Options & Upgrades:

Build It Once. Build It Right.

Enhance performance and comfort with integrated systems:

- Automated drip irrigation systems for scheduled watering and reduced labor

Plan Your Plot Today!
